

## CURRENT VACANCY

### RESIDENT ENGINEER/ PROJECT ENGINEER

SRC Infrastructure has been providing project management and engineering-based advisory, consultancy and managed services solutions to UK infrastructure clients for almost 20 years. We are a small to medium sized company that has built a strong reputation delivering multi-disciplinary projects and programmes for private and public sector clients. We carry out multi-disciplinary design packages and support clients with turnkey domain expertise in their teams.

We are currently looking for a **Resident Engineer/Project Engineer** to join our collaborative and dynamic team and contribute to achieve year on year growth.

#### Job type:

- Full time – permanent

#### Remuneration and Benefits:

- Basic Salary - Competitive
- Annual Bonus - Lucrative bonus depending on company performance
- Benefits - Pension Scheme, Flexi-time working arrangements, Annual Gym Membership, Free Breakfast (Canary Wharf Office), Free after work drinks at our Canary Wharf office bar

#### Location:

- London – flexible to travel between SRC Office (Canary Wharf) and various client offices

#### Job Summary

Day-to-day you will be involved in the design, engineering and project management of infrastructure projects based in the UK. You will be required to assist in planning, coordinating and executing engineering projects within your area of expertise, as well as representing SRC at client facing meetings with confidence and credibility. You will be working closely and directly with external/client staff, key stakeholders and the internal SRC team.

- Experience in multidisciplinary environment
- Prepare, coordinate and monitor the assigned engineering projects
- Prepare technical specifications and documents for bidding and construction
- Monitor compliance to applicable codes, standards and specifications
- Communicate with the project manager and wider team to provide assistance and technical support

#### Essential Criteria:

- Right to work in the UK
- Degree in Civil Engineering (Bsc, MSc or MEng)
- At least 5+ years of previous professional engineering design / design management experience on transportation, water, and/or land development projects is required
- Experience in the Rail Industry and a sound understanding of the Rail Environment, rules and regulations
- Excellent written and verbal communication skills
- Proven ability to work under pressure within time constraints

- Displayed ability to learn quickly and driven to broaden knowledge base
- Proven capability to build relationships, be proactive and be part of a variety of teams, including multidisciplinary teams
- Computer literate and good experience of computer software programs such as, MS Office (Word, Excel, Project)

Desirable Criteria

- Experience and practice in the following: Network Rail GRIP, PACE and/or TfL Pathway
- AutoCAD drafting and 3D/BIM modelling
- Masters of Science Degree in Engineering Subject or related
